

An Analytical Perspective on Career Preparation Among University Students

Shreya Tewari (2210990839)

Supervised By
Dr. Preeti Saini

Department of Computer Science and Engineering,
Chitkara University, Punjab

- Career preparation plays an important role in helping students transition from academics to professional life.
- Many students believe they are ready for jobs, but employers often observe a lack of required skills.
- This creates a gap between student confidence and actual employability.
- Colleges provide training, internships, and placement support to improve readiness.

- To evaluate the level of career preparation among university students.
- To analyze the relationship between institutional support and job confidence.
- To identify the key factors affecting employability.
- To apply statistical methods for meaningful analysis.

- There is a noticeable gap between academic learning and industry requirements.
- Many students lack practical skills needed for employment.
- Awareness and access to career support services vary among students.
- Not all students receive equal opportunities like internships or mock interviews.

- Most existing studies focus mainly on the employer's perspective rather than student experiences.
- Many studies rely only on descriptive analysis without using advanced statistical methods.
- There is limited research based on primary data collected directly from students.
- Very few studies combine survey data with statistical techniques like correlation and regression.

- Data was collected using a structured survey through Google Forms.
- A total of 169 valid responses were recorded from university students.
- The survey was divided into four sections covering different aspects of preparation.
- Data analysis was performed using Python programming.

- Data was collected using a structured questionnaire through Google Forms.
- A total of 169 valid responses were obtained from university students.
- The survey was conducted between January 2025 and April 2026.
- The questionnaire was divided into four sections covering different aspects of career preparation.

Demographic Analysis

- Most survey respondents were 3rd and 4th year students, indicating higher involvement in career preparation activities.

What is your current academic status?

169 responses

- Chi-Square Test was used to identify relationships between categorical variables.
- Pearson Correlation was used to measure the strength of relationships between factors.
- Linear Regression was used to predict job confidence based on training effectiveness.
- Python libraries like matplotlib, numpy, and scipy were used for analysis and visualization.

How often does your college organize career-related workshops or seminars?

169 responses

Do you feel your college curriculum prepares you for real-world jobs?

169 responses

What do you think is the biggest challenge students face in getting jobs?

169 responses

Are you satisfied with the career preparation support provided by your college?

169 responses

- Training effectiveness was found to be the strongest predictor of job confidence.
- A strong relationship exists between institutional support and student readiness.
- Students with access to mock interviews showed higher confidence levels.
- All key factors such as training, workshops, and guidance were positively correlated.

- Training effectiveness has the highest impact on student job confidence.
- Strong relationships exist between institutional support and career readiness.
- Students with access to mock interviews show higher confidence levels.
- Skill gap is the most significant barrier to employment for students.

- Career readiness depends on multiple factors including training, skills, and guidance.
- Training quality has the highest impact on student job confidence.
- Institutional support plays a crucial role in improving employability.
- Skill gap remains the biggest barrier for students entering the workforce.

- The study is based on a sample size of 169 students, which may limit generalization.
- Data is based on self-reported responses, which may include bias.
- The study focuses mainly on students from a single institutional context.
- Percentage-based reconstruction of data was used instead of raw dataset processing.

Thank You
